Additional Practice: Solutions

Part A: Additional Practice 1 Solutions

1. In this exercise, create a program to add a new job into the JOBS table.

   a. Create a stored procedure called NEW_JOB to enter a new job into the JOBS table. The procedure should accept three parameters. The first and second parameters supply a job ID and a job title. The third parameter supplies the minimum salary. Use the maximum salary for the new job as twice the minimum salary supplied for the job ID.

```
CREATE OR REPLACE PROCEDURE new_job(
  jobid  IN jobs.job_id%TYPE,
  title  IN jobs.job_title%TYPE,
  minsal IN jobs.min_salary%TYPE) IS
  maxsal  jobs.max_salary%TYPE := 2 * minsal;
BEGIN
  INSERT INTO jobs(job_id, job_title, min_salary, max_salary)
  VALUES (jobid, title, minsal, maxsal);
  DBMS_OUTPUT.PUT_LINE ('New row added to JOBS table:');
  DBMS_OUTPUT.PUT_LINE (jobid || '  ' || title ||' '||
                        minsal || '  ' || maxsal);
END new_job;
/
SHOW ERRORS
```

   b. Invoke the procedure to add a new job with job ID 'SY_ANAL', job title 'System Analyst', and minimum salary 6,000.

```
SET SERVEROUTPUT ON
EXECUTE new_job ('SY_ANAL', 'System Analyst', 6000)
```

   c. Check whether a row was added and note the new job ID for use in the next exercise. Commit the changes.

```
SELECT *
FROM   jobs
WHERE  job_id = 'SY_ANAL';
```

	JOB_ID	JOB_TITLE	MIN_SALARY	MAX_SALARY
1	SY_ANAL	System Analyst	6000	12000

```
COMMIT;
```

Part A: Additional Practice 2 Solutions

2. In this exercise, create a program to add a new row to the JOB_HISTORY table for an existing employee.

   a. Create a stored procedure called ADD_JOB_HIST to add a new row into the JOB_HISTORY table for an employee who is changing his job to the new job ID ('SY_ANAL') that you created in exercise 1b.

      The procedure should provide two parameters: one for the employee ID who is changing the job and the second for the new job ID. Read the employee ID from the EMPLOYEES table and insert it into the JOB_HISTORY table. Make the hire date of this employee as the start date and today's date as the end date for this row in the JOB_HISTORY table.

      Change the hire date of this employee in the EMPLOYEES table to today's date. Update the job ID of this employee to the job ID passed as parameter (use the 'SY_ANAL' job ID) and salary equal to the minimum salary for that job ID plus 500.

      Note: Include exception handling to handle an attempt to insert a nonexistent employee.

```
CREATE OR REPLACE PROCEDURE add_job_hist(
  emp_id    IN employees.employee_id%TYPE,
  new_jobid IN jobs.job_id%TYPE) IS
BEGIN
  INSERT INTO job_history
    SELECT employee_id, hire_date, SYSDATE, job_id, department_id
    FROM   employees
    WHERE  employee_id = emp_id;
  UPDATE employees
    SET  hire_date = SYSDATE,
         job_id = new_jobid,
         salary = (SELECT min_salary + 500
                   FROM   jobs
                   WHERE  job_id = new_jobid)
   WHERE employee_id = emp_id;
  DBMS_OUTPUT.PUT_LINE ('Added employee ' || emp_id ||
                        ' details to the JOB_HISTORY table');
  DBMS_OUTPUT.PUT_LINE ('Updated current job of employee ' ||
                        emp_id|| ' to '|| new_jobid);
EXCEPTION
  WHEN NO_DATA_FOUND THEN
    RAISE_APPLICATION_ERROR (-20001, 'Employee does not exist!');
END add_job_hist;
/
SHOW ERRORS
```

Part A: Additional Practice 2 Solutions (continued)

b. Disable all triggers on the EMPLOYEES, JOBS, and JOB_HISTORY tables before invoking the ADD_JOB_HIST procedure.

```
ALTER TABLE employees DISABLE ALL TRIGGERS;
ALTER TABLE jobs DISABLE ALL TRIGGERS;
ALTER TABLE job_history DISABLE ALL TRIGGERS;
```

c. Execute the procedure with employee ID 106 and job ID 'SY_ANAL' as parameters.

```
EXECUTE add_job_hist(106, 'SY_ANAL')
```

d. Query the JOB_HISTORY and EMPLOYEES tables to view your changes for employee 106, and then commit the changes.

```
SELECT *   FROM   job_history
WHERE  employee_id = 106;
```

	EMPLOYEE_ID	START_DATE	END_DATE	JOB_ID	DEPARTMENT_ID
1	106	05-FEB-98	25-FEB-09	IT_PROG	60

```
SELECT job_id, salary   FROM   employees
WHERE  employee_id = 106;
```

	JOB_ID	SALARY
1	SY_ANAL	6500

```
COMMIT;
```

e. Reenable the triggers on the EMPLOYEES, JOBS, and JOB_HISTORY tables.

```
ALTER TABLE employees ENABLE ALL TRIGGERS;
ALTER TABLE jobs ENABLE ALL TRIGGERS;
ALTER TABLE job_history ENABLE ALL TRIGGERS;
```

Part A: Additional Practice 3 Solutions

3. In this exercise, create a program to update the minimum and maximum salaries for a job in the JOBS table.

   a. Create a stored procedure called UPD_JOBSAL to update the minimum and maximum salaries for a specific job ID in the JOBS table. The procedure should provide three parameters: the job ID, a new minimum salary, and a new maximum salary. Add exception handling to account for an invalid job ID in the JOBS table. Raise an exception if the maximum salary supplied is less than the minimum salary. Provide a message that will be displayed if the row in the JOBS table is locked.
   Hint: The resource locked/busy error number is –54.

```
CREATE OR REPLACE PROCEDURE upd_jobsal(
  jobid       IN jobs.job_id%type,
  new_minsal  IN jobs.min_salary%type,
  new_maxsal  IN jobs.max_salary%type) IS
  dummy            PLS_INTEGER;
  e_resource_busy  EXCEPTION;
  sal_error        EXCEPTION;
  PRAGMA           EXCEPTION_INIT (e_resource_busy , -54);
BEGIN
  IF (new_maxsal < new_minsal) THEN
    RAISE sal_error;
  END IF;
  SELECT 1 INTO dummy
    FROM jobs
    WHERE job_id = jobid
    FOR UPDATE OF min_salary NOWAIT;
  UPDATE jobs
    SET min_salary =  new_minsal,
        max_salary =  new_maxsal
    WHERE job_id  = jobid;
EXCEPTION
  WHEN e_resource_busy THEN
    RAISE_APPLICATION_ERROR (-20001,
      'Job information is currently locked, try later.');
  WHEN NO_DATA_FOUND THEN
    RAISE_APPLICATION_ERROR(-20001, 'This job ID does not exist');
  WHEN sal_error THEN
    RAISE_APPLICATION_ERROR(-20001,
     'Data error: Max salary should be more than min salary');
END upd_jobsal;
/
SHOW ERRORS
```

Part A: Additional Practice 3 Solutions (continued)

b. Execute the UPD_JOBSAL procedure by using a job ID of 'SY_ANAL', a minimum salary of 7000, and a maximum salary of 140.
Note: This should generate an exception message.

```
EXECUTE upd_jobsal('SY_ANAL', 7000, 140)

Error report:
ORA-20001: Data error: Max salary should be more than min salary
ORA-06512: at "ORA61.UPD_JOBSAL", line 28
ORA-06512: at line 1
```

c. Disable triggers on the EMPLOYEES and JOBS tables.

```
ALTER TABLE employees DISABLE ALL TRIGGERS;
ALTER TABLE jobs DISABLE ALL TRIGGERS;
```

d. Execute the UPD_JOBSAL procedure using a job ID of 'SY_ANAL', a minimum salary of 7000, and a maximum salary of 14000.

```
EXECUTE upd_jobsal('SY_ANAL', 7000, 14000)
```

e. Query the JOBS table to view your changes, and then commit the changes.

```
SELECT *
FROM  jobs
WHERE job_id = 'SY_ANAL';

COMMIT;
```

	JOB_ID	JOB_TITLE	MIN_SALARY	MAX_SALARY
1	SY_ANAL	System Analyst	7000	14000

f. Enable the triggers on the EMPLOYEES and JOBS tables.

```
ALTER TABLE employees ENABLE ALL TRIGGERS;
ALTER TABLE jobs ENABLE ALL TRIGGERS;
```

Part A: Additional Practice 4 Solutions

4. In this exercise, create a procedure to monitor whether employees have exceeded their average salaries for their job type.

   a. Disable the SECURE_EMPLOYEES trigger.

```
ALTER TRIGGER secure_employees DISABLE;
```

   b. In the EMPLOYEES table, add an EXCEED_AVGSAL column for storing up to three characters and a default value of NO. Use a check constraint to allow the values YES or NO.

```
ALTER TABLE employees (
  ADD (exceed_avgsal VARCHAR2(3) DEFAULT 'NO'
    CONSTRAINT employees_exceed_avgsal_ck
    CHECK (exceed_avgsal IN ('YES', 'NO')));
```

   c. Write a stored procedure called CHECK_AVGSAL that checks whether each employee's salary exceeds the average salary for the JOB_ID. The average salary for a job is calculated from information in the JOBS table. If the employee's salary exceeds the average for his or her job, update his or her EXCEED_AVGSAL column in the EMPLOYEES table to a value of YES; otherwise, set the value to NO. Use a cursor to select the employee's rows using the FOR UPDATE option in the query. Add exception handling to account for a record being locked.
   Hint: The resource locked/busy error number is –54. Write and use a local function called GET_JOB_AVGSAL to determine the average salary for a job ID specified as a parameter.

```
CREATE OR REPLACE PROCEDURE check_avgsal IS
  avgsal_exceeded employees.exceed_avgsal%type;
  CURSOR  emp_csr IS
    SELECT  employee_id, job_id, salary
    FROM employees
    FOR UPDATE;
  e_resource_busy  EXCEPTION;
  PRAGMA EXCEPTION_INIT(e_resource_busy, -54);
```

```
  FUNCTION get_job_avgsal (jobid VARCHAR2) RETURN NUMBER IS
    avg_sal employees.salary%type;
  BEGIN
    SELECT (max_salary + min_salary)/2 INTO avg_sal
    FROM jobs
    WHERE job_id = jobid;
    RETURN avg_sal;
  END;

BEGIN
  FOR emprec IN emp_csr
  LOOP
    avgsal_exceeded := 'NO';
    IF emprec.salary >= get_job_avgsal(emprec.job_id) THEN
      avgsal_exceeded := 'YES';
    END IF;
    UPDATE employees
      SET exceed_avgsal = avgsal_exceeded
      WHERE CURRENT OF emp_csr;
  END LOOP;
EXCEPTION
  WHEN e_resource_busy THEN
    ROLLBACK;
    RAISE_APPLICATION_ERROR (-20001, 'Record is busy, try later.');
END check_avgsal;
/
SHOW ERRORS
```

d. Execute the CHECK_AVGSAL procedure. Then, to view the results of your modifications, write a query to display the employee's ID, job, the average salary for the job, the employee's salary, and the exceed_avgsal indicator column for employees whose salaries exceed the average for their job, and finally commit the changes.

```
EXECUTE check_avgsal

SELECT e.employee_id, e.job_id, (j.max_salary-j.min_salary/2) job_avgsal,
       e.salary, e.exceed_avgsal avg_exceeded
FROM   employees e, jobs j
WHERE  e.job_id = j.job_id
and e.exceed_avgsal = 'YES';

COMMIT;
```

Part A: Additional Practice 4 Solutions (continued)

	EMPLOYEE_ID	JOB_ID	JOB_AVGSAL	SALARY	AVG_EXCEEDED
1	201	MK_MAN	10500	13000	YES

31	192	SH_CLERK	4250	4000	YES

Part A: Additional Practice 5 Solutions

5. Create a subprogram to retrieve the number of years of service for a specific employee.

   a. Create a stored function called GET_YEARS_SERVICE to retrieve the total number of years of service for a specific employee. The function should accept the employee ID as a parameter and return the number of years of service. Add error handling to account for an invalid employee ID.

```
CREATE OR REPLACE FUNCTION get_years_service(
  emp_id IN employees.employee_id%TYPE) RETURN NUMBER IS
  CURSOR jobh_csr IS
    SELECT MONTHS_BETWEEN(end_date, start_date)/12) years_in_job
    FROM   job_history
    WHERE  employee_id = emp_id;
    years_service NUMBER(2) := 0;
    years_in_job  NUMBER(2) := 0;
BEGIN
  FOR jobh_rec IN jobh_csr
  LOOP
    EXIT WHEN jobh_csr%NOTFOUND;
    years_service := years_service + job_rec.years_in_job;
  END LOOP;
  SELECT MONTHS_BETWEEN(SYSDATE, hire_date)/12 INTO years_in_job
  FROM   employees
  WHERE  employee_id = emp_id;
  years_service := years_service + years_in_job;
  RETURN ROUND(years_service);
EXCEPTION
  WHEN NO_DATA_FOUND THEN
    RAISE_APPLICATION_ERROR(-20348,
      'Employee with ID '|| emp_id ||' does not exist.');
END get_years_service;
/
SHOW ERRORS
```

   b. Invoke the GET_YEARS_SERVICE function in a call to DBMS_OUTPUT.PUT_LINE for an employee with ID 999.

```
EXECUTE DBMS_OUTPUT.PUT_LINE(get_years_service (999))

Error report:
ORA-20348: Employee with ID 999 does not exist.
ORA-06512: at "ORA61.GET_YEARS_SERVICE", line 22
ORA-06512: at line 1
```

Part A: Additional Practice 5 Solutions (continued)

c. Display the number of years of service for employee 106 with DBMS_OUTPUT.PUT_LINE invoking the GET_YEARS_SERVICE function.

```
SET SERVEROUTPUT ON
BEGIN
  DBMS_OUTPUT.PUT_LINE (
    'Employee 106 has worked ' || get_years_service(106) || ' years');
END;
/
anonymous block completed
Employee 106 has worked 11 years
```

d. Query the JOB_HISTORY and EMPLOYEES tables for the specified employee to verify that the modifications are accurate.
Note: The values represented in the results on this page may differ from those that you get when you run these queries.

```
SELECT employee_id, job_id,
       MONTHS_BETWEEN(end_date, start_date)/12 duration
FROM   job_history;
```

	EMPLOYEE_ID	JOB_ID	DURATION
1	106	IT_PROG	11.054242520410195141377937076861808044 58

```
SELECT job_id, MONTHS_BETWEEN(SYSDATE, hire_date)/12 duration
FROM   employees
WHERE  employee_id = 106;
```

	JOB_ID	DURATION
1	SY_ANAL	0

Part A: Additional Practice 6 Solutions

6. In this exercise, create a program to retrieve the number of different jobs that an employee worked on during his or her service.

   a. Create a stored function called GET_JOB_COUNT to retrieve the total number of different jobs on which an employee worked.

      The function should accept the employee ID in a parameter and return the number of different jobs that the employee worked on until now, including the present job. Add exception handling to account for an invalid employee ID.
      Hint: Use the distinct job IDs from the JOB_HISTORY table and exclude the current job ID, if it is one of the job IDs on which the employee has already worked. Write a UNION of two queries and count the rows retrieved into a PL/SQL table. Use a FETCH with BULK COLLECT INTO to obtain the unique jobs for the employee.

```
CREATE OR REPLACE FUNCTION get_job_count(
  emp_id IN employees.employee_id%TYPE) RETURN NUMBER IS
  TYPE jobs_tabtype IS TABLE OF jobs.job_id%type;
  jobtab jobs_tabtype;
  CURSOR empjob_csr IS
   SELECT job_id
   FROM job_history
   WHERE employee_id = emp_id
   UNION
   SELECT job_id
   FROM employees
   WHERE employee_id = emp_id;
BEGIN
  OPEN empjob_csr;
  FETCH empjob_csr BULK COLLECT INTO jobtab;
  CLOSE empjob_csr;
  RETURN jobtab.count;
EXCEPTION
  WHEN NO_DATA_FOUND THEN
    RAISE_APPLICATION_ERROR(-20348,
      'Employee with ID '|| emp_id ||' does not exist!');
END get_job_count;
/
SHOW ERRORS
```

Part A: Additional Practice 6 Solutions (continued)

b. Invoke the function for an employee with ID 176.

```
SET SERVEROUTPUT ON
BEGIN
  DBMS_OUTPUT.PUT_LINE('Employee 176 worked on ' ||
     get_job_count(176) || ' different jobs.');
END;
/
anonymous block completed
Employee 176 worked on 2 different jobs.
```

Part A: Additional Practice 7 Solutions

7. Create a package called EMPJOB_PKG that contains your NEW_JOB, ADD_JOB_HIST, and UPD_JOBSAL procedures, as well as your GET_YEARS_SERVICE and GET_JOB_COUNT functions.

   a. Create the package specification with all the subprogram constructs public. Move any subprogram local-defined types into the package specification.

```
CREATE OR REPLACE PACKAGE empjob_pkg IS
  TYPE jobs_tabtype IS TABLE OF jobs.job_id%type;

  PROCEDURE add_job_hist(
    emp_id IN employees.employee_id%TYPE,
    new_jobid IN jobs.job_id%TYPE);
  FUNCTION get_job_count(
   emp_id IN employees.employee_id%TYPE) RETURN NUMBER;
   FUNCTION get_years_service(
   emp_id IN employees.employee_id%TYPE) RETURN NUMBER;
  PROCEDURE new_job(
   jobid IN jobs.job_id%TYPE,
    title IN jobs.job_title%TYPE,
    minsal IN jobs.min_salary%TYPE);
  PROCEDURE upd_jobsal(
    jobid IN jobs.job_id%type,
    new_minsal IN jobs.min_salary%type,
    new_maxsal IN jobs.max_salary%type);
END empjob_pkg;
/
SHOW ERRORS
```

Part A: Additional Practice 7 Solutions (continued)

b. Create the package body with the subprogram implementation; remember to remove (from the subprogram implementations) any types that you moved into the package specification.

```
CREATE OR REPLACE PACKAGE BODY empjob_pkg IS
  PROCEDURE add_job_hist(
    emp_id IN employees.employee_id%TYPE,
    new_jobid IN jobs.job_id%TYPE) IS
  BEGIN
    INSERT INTO job_history
      SELECT employee_id, hire_date, SYSDATE, job_id, department_id
      FROM employees
      WHERE employee_id = emp_id;
    UPDATE employees
      SET hire_date = SYSDATE,
          job_id = new_jobid,
          salary = (SELECT min_salary + 500
                    FROM jobs
          WHERE job_id = new_jobid)
      WHERE employee_id = emp_id;
    DBMS_OUTPUT.PUT_LINE ('Added employee ' || emp_id ||
       ' details to the JOB_HISTORY table');
    DBMS_OUTPUT.PUT_LINE ('Updated current job of employee ' ||
       emp_id|| ' to '|| new_jobid);
  EXCEPTION
    WHEN NO_DATA_FOUND THEN
      RAISE_APPLICATION_ERROR (-20001, 'Employee does not exist!');
  END add_job_hist;

  FUNCTION get_job_count(
    emp_id IN employees.employee_id%TYPE) RETURN NUMBER IS
    jobtab jobs_tabtype;
    CURSOR empjob_csr IS
      SELECT job_id
      FROM job_history
      WHERE employee_id = emp_id
      UNION
      SELECT job_id
      FROM employees
      WHERE employee_id = emp_id;
  BEGIN
    OPEN empjob_csr;
    FETCH empjob_csr BULK COLLECT INTO jobtab;
    CLOSE empjob_csr;
    RETURN jobtab.count;
  EXCEPTION
    WHEN NO_DATA_FOUND THEN
      RAISE_APPLICATION_ERROR(-20348,
        'Employee with ID '|| emp_id ||' does not exist!');
  END get_job_count;
```

Part A: Additional Practice 7 Solutions (continued)

```
  FUNCTION get_years_service(
    emp_id IN employees.employee_id%TYPE) RETURN NUMBER IS
    CURSOR jobh_csr IS
      SELECT MONTHS_BETWEEN(end_date, start_date)/12 years_in_job
      FROM job_history
      WHERE employee_id = emp_id;
    years_service NUMBER(2) := 0;
    years_in_job NUMBER(2) := 0;
  BEGIN
    FOR jobh_rec IN jobh_csr
    LOOP
      EXIT WHEN jobh_csr%NOTFOUND;
      years_service := years_service + jobh_rec.years_in_job;
    END LOOP;
    SELECT MONTHS_BETWEEN(SYSDATE, hire_date)/12 INTO years_in_job
    FROM employees
    WHERE employee_id = emp_id;
    years_service := years_service + years_in_job;
    RETURN ROUND(years_service);
  EXCEPTION
    WHEN NO_DATA_FOUND THEN
      RAISE_APPLICATION_ERROR(-20348,
        'Employee with ID '|| emp_id ||' does not exist.');
  END get_years_service;

  PROCEDURE new_job(
    jobid IN jobs.job_id%TYPE,
    title IN jobs.job_title%TYPE,
    minsal IN jobs.min_salary%TYPE) IS
    maxsal jobs.max_salary%TYPE := 2 * minsal;
  BEGIN
    INSERT INTO jobs(job_id, job_title, min_salary, max_salary)
    VALUES (jobid, title, minsal, maxsal);
    DBMS_OUTPUT.PUT_LINE ('New row added to JOBS table:');
    DBMS_OUTPUT.PUT_LINE (jobid || ' ' || title ||' '||
                          minsal || ' ' || maxsal);
  END new_job;
```

```
  PROCEDURE upd_jobsal(
    jobid IN jobs.job_id%type,
    new_minsal IN jobs.min_salary%type,
    new_maxsal IN jobs.max_salary%type) IS
    dummy PLS_INTEGER;
    e_resource_busy EXCEPTION;
    sal_error EXCEPTION;
    PRAGMA EXCEPTION_INIT (e_resource_busy , -54);
  BEGIN
    IF (new_maxsal < new_minsal) THEN
      RAISE sal_error;
    END IF;
    SELECT 1 INTO dummy
    FROM jobs
    WHERE job_id = jobid
    FOR UPDATE OF min_salary NOWAIT;
    UPDATE jobs
      SET min_salary = new_minsal,
          max_salary = new_maxsal
    WHERE job_id = jobid;
  EXCEPTION
    WHEN e_resource_busy THEN
      RAISE_APPLICATION_ERROR (-20001,
        'Job information is currently locked, try later.');
    WHEN NO_DATA_FOUND THEN
      RAISE_APPLICATION_ERROR(-20001, 'This job ID does not exist');
    WHEN sal_error THEN
      RAISE_APPLICATION_ERROR(-20001,
        'Data error: Max salary should be more than min salary');
  END upd_jobsal;
END empjob_pkg;
/
```

c. Invoke your `EMPJOB_PKG.NEW_JOB` procedure to create a new job with ID `PR_MAN`, job title `Public Relations Manager`, and salary `6250`.

```
EXECUTE empjob_pkg.new_job('PR_MAN', 'Public Relations Manager', 6250)
```

Part A: Additional Practice 7 Solutions (continued)

d. Invoke your EMPJOB_PKG.ADD_JOB_HIST procedure to modify the job of employee ID 110 to job ID PR_MAN.
Note: You need to disable the UPDATE_JOB_HISTORY trigger before you execute the ADD_JOB_HIST procedure, and reenable the trigger after you have executed the procedure.

```
ALTER TRIGGER update_job_history DISABLE;
EXECUTE empjob_pkg.add_job_hist(110, 'PR_MAN')
ALTER TRIGGER update_job_history ENABLE;
```

e. Query the JOBS, JOB_HISTORY, and EMPLOYEES tables to verify the results.

```
SELECT * FROM jobs WHERE job_id = 'PR_MAN';
SELECT * FROM job_history WHERE employee_id = 110;
SELECT job_id, salary FROM employees WHERE employee_id = 110;
```

	JOB_ID	JOB_TITLE	MIN_SALARY	MAX_SALARY
1	PR_MAN	Public Relations Manager	6250	12500

	EMPLOYEE_ID	START_DATE	END_DATE	JOB_ID	DEPARTMENT_ID
1	110	28-SEP-97	25-FEB-09	FI_ACCOUNT	100

	JOB_ID	SALARY
1	PR_MAN	6750

Part A: Additional Practice 8 Solutions

8. In this exercise, create a trigger to ensure that the minimum and maximum salaries of a job are never modified such that the salary of an existing employee with that job ID is outside the new range specified for the job.

   a. Create a trigger called CHECK_SAL_RANGE that is fired before every row that is updated in the MIN_SALARY and MAX_SALARY columns in the JOBS table. For any minimum or maximum salary value that is changed, check whether the salary of any existing employee with that job ID in the EMPLOYEES table falls within the new range of salaries specified for this job ID. Include exception handling to cover a salary range change that affects the record of any existing employee.

```
CREATE OR REPLACE TRIGGER check_sal_range
BEFORE UPDATE OF min_salary, max_salary ON jobs
FOR EACH ROW
DECLARE
  minsal employees.salary%TYPE;
  maxsal employees.salary%TYPE;
  e_invalid_salrange EXCEPTION;
BEGIN
  SELECT MIN(salary), MAX(salary) INTO minsal, maxsal
  FROM employees
  WHERE job_id = :NEW.job_id;
  IF (minsal < :NEW.min_salary) OR (maxsal > :NEW.max_salary) THEN
    RAISE e_invalid_salrange;
  END IF;
EXCEPTION
  WHEN e_invalid_salrange THEN
    RAISE_APPLICATION_ERROR(-20550,
     'Employees exist whose salary is out of the specified range. '||
     'Therefore the specified salary range cannot be updated.');
END check_sal_range;
/
SHOW ERRORS
```

   b. Test the trigger using the SY_ANAL job, setting the new minimum salary to 5000 and the new maximum salary to 7000. Before you make the change, write a query to display the current salary range for the SY_ANAL job ID, and another query to display the employee ID, last name, and salary for the same job ID. After the update, query the change (if any) to the JOBS table for the specified job ID.

```
SELECT * FROM jobs
WHERE job_id = 'SY_ANAL';
```

	JOB_ID	JOB_TITLE	MIN_SALARY	MAX_SALARY
1	SY_ANAL	System Analyst	7000	14000

```
SELECT employee_id, last_name, salary
FROM  employees
WHERE job_id = 'SY_ANAL';
```

	EMPLOYEE_ID	LAST_NAME	SALARY
1	106	Pataballa	6500

```
UPDATE jobs
  SET min_salary = 5000, max_salary = 7000
  WHERE job_id = 'SY_ANAL';

1 row updated.

SELECT * FROM jobs
WHERE job_id = 'SY_ANAL';
```

	JOB_ID	JOB_TITLE	MIN_SALARY	MAX_SALARY
1	SY_ANAL	System Analyst	5000	7000

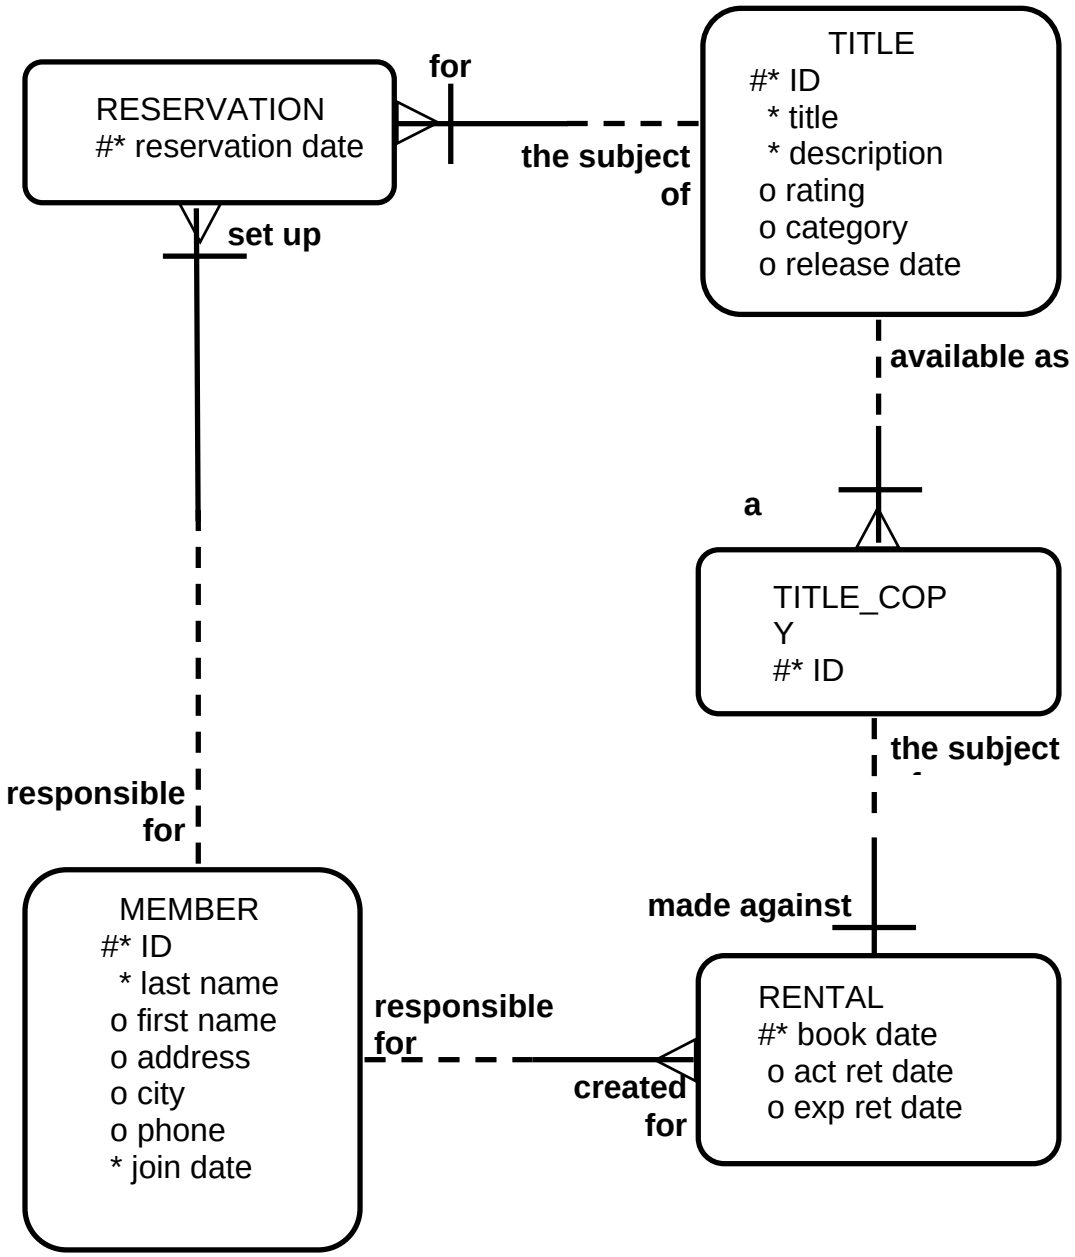
c. Using the job SY_ANAL, set the new minimum salary to 7000 and the new maximum salary to 18000. Explain the results.

```
UPDATE jobs
  SET min_salary = 7000, max_salary = 18000
  WHERE job_id = 'SY_ANAL';

Error report:
SQL Error: ORA-20550: Employees exist whose salary is out of the
specified range. Therefore the specified salary range cannot be updated.
ORA-06512: at "ORA61.CHECK_SAL_RANGE", line 14
ORA-04088: error during execution of trigger 'ORA61.CHECK_SAL_RANGE
```

The update fails to change the salary range due to the functionality provided by the `CHECK_SAL_RANGE` trigger because the employee 106 who has the `SY_ANAL` job ID has a salary of `6500`, which is less than the minimum salary for the new salary range specified in the `UPDATE` statement.

Part B: Entity Relationship Diagram



Part B (continued)

In this case study, create a package named VIDEO_PKG that contains procedures and functions for a video store application. This application enables customers to become a member of the video store. Any member can rent movies, return rented movies, and reserve movies. Additionally, create a trigger to ensure that any data in the video tables is modified only during business hours.

Create the package by using SQL Developer and use the DBMS_OUTPUT Oracle-supplied package to display messages.

The video store database contains the following tables: TITLE, TITLE_COPY, RENTAL, RESERVATION, and MEMBER. The entity relationship diagram is shown on the previous page.

Part B: Additional Practice 1 Solutions

1. Load and execute the `/home/oracle/labs/PLPU/labs/buildvid1.sql` script to create all the required tables and sequences that are needed for this exercise.

```
SET ECHO OFF
/* Script to build the Video Application (Part 1 - buildvid1.sql)
   for the Oracle Introduction to Oracle with Procedure Builder course.
   Created by: Debby Kramer Creation date: 12/10/95
   Last upated: 2/13/96
   Modified by Nagavalli Pataballa on 26-APR-2001
    For the course Introduction to Oracle9i: PL/SQL
    This part of the script creates tables and sequences that are used
    by Part B of the Additional Practices of the course.
    Ignore the errors which appear due to dropping of table.
*/

Part B: Additional Practice 3 Solutions

3. Create a package named VIDEO_PKG with the following procedures and functions:

   a. NEW_MEMBER: A public procedure that adds a new member to the MEMBER table. For the member ID number, use the sequence MEMBER_ID_SEQ. For the join date, use SYSDATE. Pass all other values to be inserted into a new row as parameters.

   b. NEW_RENTAL: An overloaded public function to record a new rental. Pass the title ID number for the video that a customer wants to rent, and either the customer's last name or his or her member ID number into the function. The function should return the due date for the video. Due dates are three days from the date the video is rented. If the status for a movie requested is listed as AVAILABLE in the TITLE_COPY table for one copy of this title, update this TITLE_COPY table and set the status to RENTED. If there is no copy available, the function must return NULL. Then, insert a new record into the RENTAL table identifying the booked date as today's date, the copy ID number, the member ID number, the title ID number, and the expected return date. Be aware of multiple customers with the same last name. In this case, have the function return NULL and display a list of the customers' names that match and their ID numbers.

   c. RETURN_MOVIE: A public procedure that updates the status of a video (available, rented, or damaged) and sets the return date. Pass the title ID, the copy ID, and the status to this procedure. Check whether there are reservations for that title, and display a message, if it is reserved. Update the RENTAL table and set the actual return date to today's date. Update the status in the TITLE_COPY table based on the status parameter passed into the procedure.

   d. RESERVE_MOVIE: A private procedure that executes only if all the video copies requested in the NEW_RENTAL procedure have a status of RENTED. Pass the member ID number and the title ID number to this procedure. Insert a new record into the RESERVATION table and record the reservation date, member ID number, and title ID number. Print a message indicating that a movie is reserved and its expected date of return.

   e. EXCEPTION_HANDLER: A private procedure that is called from the exception handler of the public programs. Pass the SQLCODE number to this procedure, and the name of the program (as a text string) where the error occurred. Use RAISE_APPLICATION_ERROR to raise a customized error. Start with a unique key violation (-1) and foreign key violation (-2292). Allow the exception handler to raise a generic error for any other errors.

Part B: Additional Practice 4 Solutions

4. Use the following scripts located in the `/home/oracle/labs/PLPU/soln` directory to test your routines:

   a. Add two members using `sol_apb_04_a.sql`.

```
SET SERVEROUTPUT ON
EXECUTE video_pkg.new_member('Haas', 'James', 'Chestnut Street',
'Boston', '617-123-4567')
EXECUTE  video_pkg.new_member('Biri', 'Allan',  'Hiawatha Drive', 'New
York', '516-123-4567')
```

   b. Add new video rentals using `sol_apb_04_b.sql`.

```
SET SERVEROUTPUT ON
EXEC DBMS_OUTPUT.PUT_LINE(video_pkg.new_rental(110, 98))
EXEC DBMS_OUTPUT.PUT_LINE(video_pkg.new_rental(109, 93))
EXEC DBMS_OUTPUT.PUT_LINE(video_pkg.new_rental(107, 98))
EXEC DBMS_OUTPUT.PUT_LINE(video_pkg.new_rental('Biri', 97))
EXEC DBMS_OUTPUT.PUT_LINE(video_pkg.new_rental(97, 97))

Error report:
ORA-20002: NEW_RENTAL has attempted to use a foreign key value that is
invalid
ORA-06512: at "ORA61.VIDEO_PKG", line 9
ORA-06512: at "ORA61.VIDEO_PKG", line 103
ORA-06512: at line 1
```

Part B: Additional Practice 4 Solutions (continued)

c. Return movies using the `sol_apb_04_c.sql` script.

```
SET SERVEROUTPUT ON
EXECUTE video_pkg.return_movie(98, 1, 'AVAILABLE')
EXECUTE video_pkg.return_movie(95, 3, 'AVAILABLE')
EXECUTE video_pkg.return_movie(111, 1, 'RENTED')

anonymous block completed
Put this movie on hold -- reserved by member #107

anonymous block completed

Error starting at line 4 in command:
EXECUTE video_pkg.return_movie(111, 1, 'RENTED')
Error report:
ORA-20999: Unhandled error in RETURN_MOVIE. Please contact your
application administrator with the following information:
ORA-01403: no data found
ORA-06512: at "ORA61.VIDEO_PKG", line 12
ORA-06512: at "ORA61.VIDEO_PKG", line 69
ORA-06512: at line 1
```

Part B: Additional Practice 5 Solutions

5. The business hours for the video store are 8:00 AM to 10:00 PM, Sunday through Friday, and 8:00 AM to 12:00 AM on Saturday. To ensure that the tables can be modified only during these hours, create a stored procedure that is called by triggers on the tables.

   a. Create a stored procedure called `TIME_CHECK` that checks the current time against business hours. If the current time is not within business hours, use the `RAISE_APPLICATION_ERROR` procedure to give an appropriate message.

```
CREATE OR REPLACE PROCEDURE time_check IS
BEGIN
  IF ((TO_CHAR(SYSDATE,'D') BETWEEN 1 AND 6) AND
      (TO_DATE(TO_CHAR(SYSDATE, 'hh24:mi'), 'hh24:mi') NOT BETWEEN
       TO_DATE('08:00', 'hh24:mi') AND TO_DATE('22:00', 'hh24:mi')))
       OR ((TO_CHAR(SYSDATE, 'D') = 7)
       AND  (TO_DATE(TO_CHAR(SYSDATE, 'hh24:mi'), 'hh24:mi') NOT BETWEEN
       TO_DATE('08:00', 'hh24:mi') AND TO_DATE('24:00', 'hh24:mi'))) THEN
    RAISE_APPLICATION_ERROR(-20999,
       'Data changes restricted to office hours.');
  END IF;
END time_check;
/
SHOW ERRORS
```

   b. Create a trigger on each of the five tables. Fire the trigger before data is inserted, updated, and deleted from the tables. Call your `TIME_CHECK` procedure from each of these triggers.

```
CREATE OR REPLACE TRIGGER member_trig
  BEFORE INSERT OR UPDATE OR DELETE ON member
CALL time_check
/

CREATE OR REPLACE TRIGGER rental_trig
  BEFORE INSERT OR UPDATE OR DELETE ON rental
CALL time_check
/

CREATE OR REPLACE TRIGGER title_copy_trig
  BEFORE INSERT OR UPDATE OR DELETE ON title_copy
CALL time_check
/

CREATE OR REPLACE TRIGGER title_trig
  BEFORE INSERT OR UPDATE OR DELETE ON title
CALL time_check
/
```

```
CREATE OR REPLACE TRIGGER reservation_trig
  BEFORE INSERT OR UPDATE OR DELETE ON reservation
CALL time_check
/
```

c. Test your triggers.

Note: In order for your trigger to fail, you may need to change the time to be outside the range of your current time in class. For example, while testing, you may want valid video hours in your trigger to be from 6:00 PM to 8:00 AM.

```
-- First determine current timezone and time
SELECT SESSIONTIMEZONE,
       TO_CHAR(CURRENT_DATE, 'DD-MON-YYYY HH24:MI') CURR_DATE
FROM DUAL;
```

	SESSIONTIMEZONE	CURR_DATE
1	-05:00	25-FEB-2009 05:05

```
-- If required, change your time zone using [+|-]HH:MI format such that
the current
-- time returns a time between 6pm and 8am
ALTER SESSION SET TIME_ZONE='-07:00';

-- check your timezone again

SELECT SESSIONTIMEZONE,
       TO_CHAR(CURRENT_DATE, 'DD-MON-YYYY HH24:MI') CURR_DATE
FROM DUAL;
```

Part B: Additional Practice 5 Solutions (continued)

```
-- Add a new member (for a sample test)
EXECUTE  video_pkg.new_member('Elias', 'Elliane',  'Vine Street',
'California', '789-123-4567')
