

# 1

## Introduction to PL/SQL

# Objectives

After completing this lesson, you should be able to do the following:

- Explain the need for PL/SQL
- Explain the benefits of PL/SQL
- Identify the different types of PL/SQL blocks
- Use Oracle SQL Developer as a development environment for PL/SQL
- Output messages from PL/SQL

# What Is PL/SQL?

## PL/SQL:

- Stands for Procedural Language extension to SQL
- Is Oracle Corporation's standard data access language for relational databases
- Seamlessly integrates procedural constructs with SQL

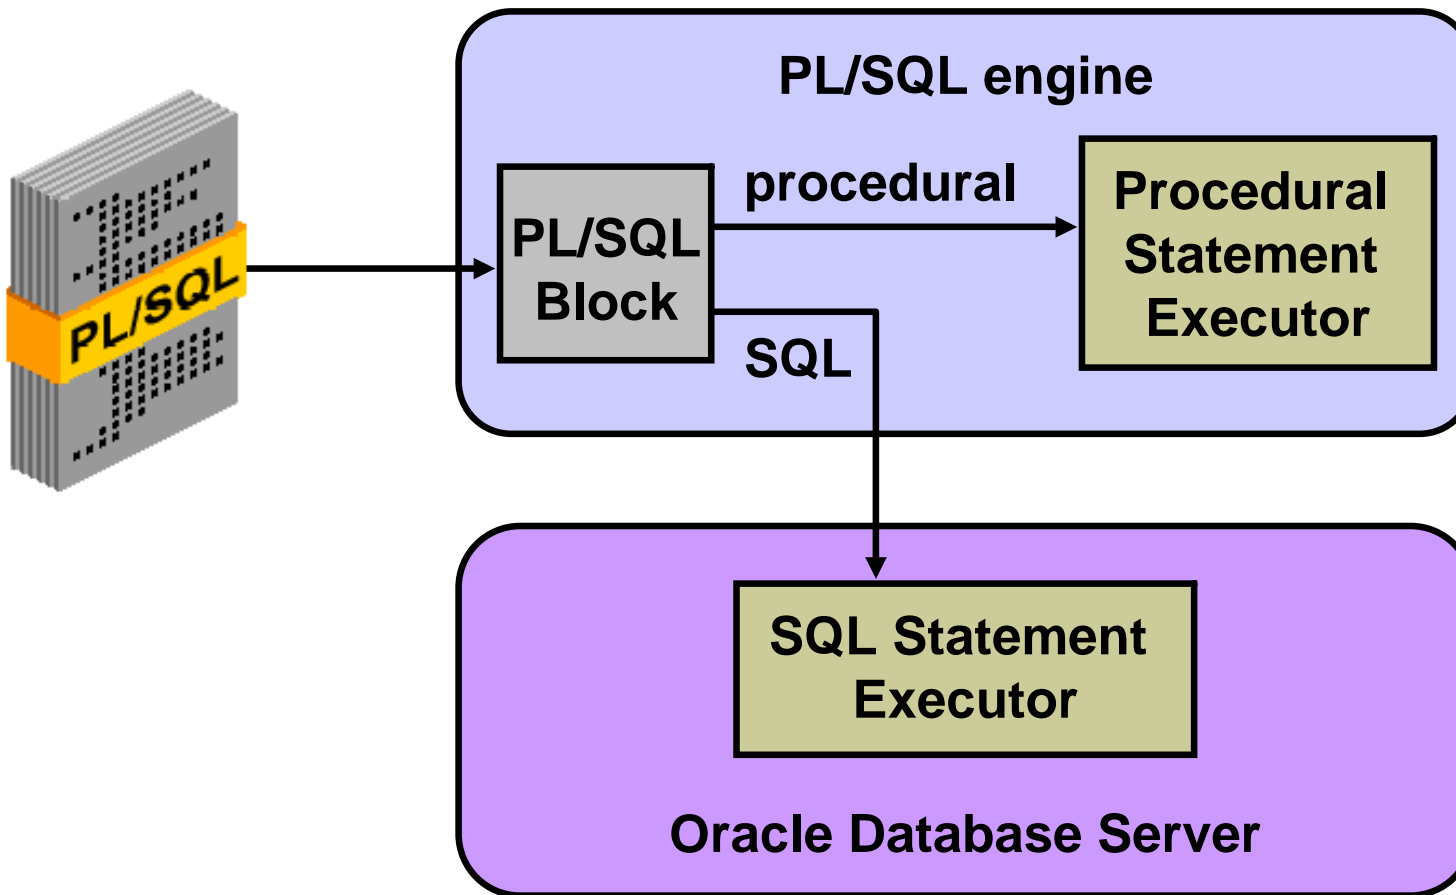

# About PL/SQL

## PL/SQL:

- Provides a block structure for executable units of code. Maintenance of code is made easier with such a well-defined structure.
- Provides procedural constructs such as:
  - Variables, constants, and types
  - Control structures such as conditional statements and loops
  - Reusable program units that are written once and executed many times

# PL/SQL Environment

# Benefits of PL/SQL

- Integration of procedural constructs with SQL
- Improved performance

# Benefits of PL/SQL

- Modularized program development
- Integration with Oracle tools
- Portability
- Exception handling

# PL/SQL Block Structure

- DECLARE (optional)
  - Variables, cursors, user-defined exceptions
- BEGIN (mandatory)
  - SQL statements
  - PL/SQL statements
- EXCEPTION (optional)
  - Actions to perform when errors occur
- END; (mandatory)

# Block Types

## Anonymous

```
[DECLARE]

BEGIN
    --statements

[EXCEPTION]

END;
```

## Procedure

```
PROCEDURE name
IS

BEGIN
    --statements

[EXCEPTION]

END;
```

## Function

```
FUNCTION name
RETURN datatype
IS
BEGIN
    --statements
    RETURN value;
[EXCEPTION]

END;
```

# Program Constructs

# PL/SQL Programming Environments

## Oracle JDeveloper

# PL/SQL Programming Environments

## Oracle SQL Developer

# Creating a Database Connection

**New / Select Database Connection**

Connection Name: ora41  
Username: ora41  
Password: \*\*\*\*\*  
☒ Save Password

Oracle

Role: default  
Connection Type: Basic

☐ OS Authentication  
☐ Proxy Connection

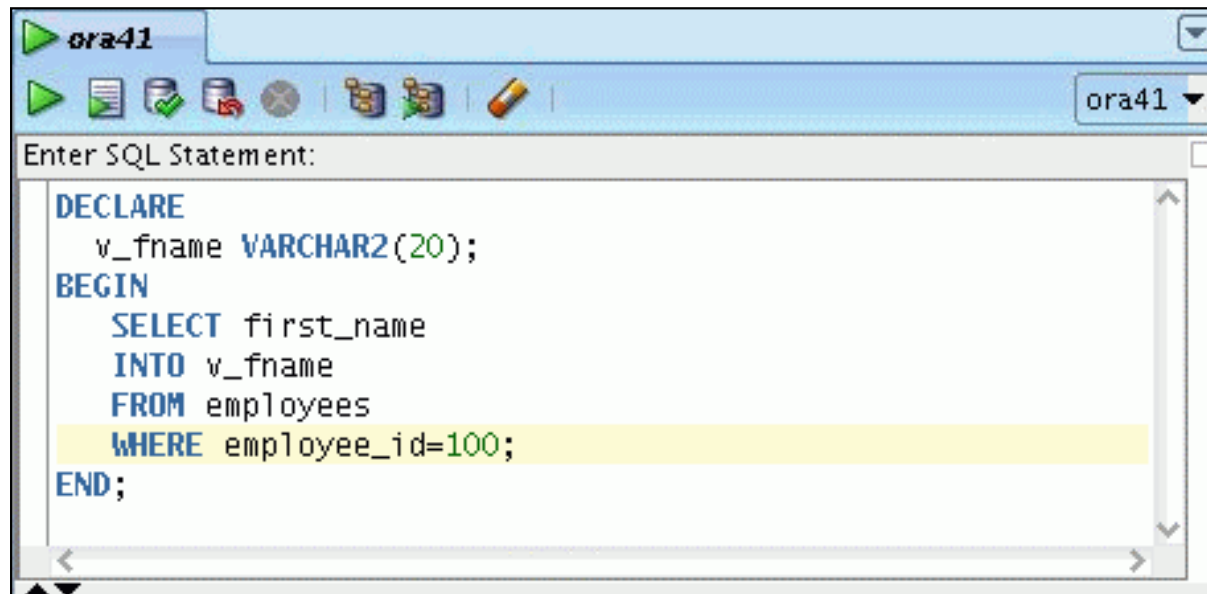

Hostname: localhost  
Port: 1521  
SID: orcl  
Service name:   
☒ SID  
☐ Service name

Status : Success

Buttons: Help, Save, Clear, Test, Connect, Cancel

# Creating an Anonymous Block

Enter the anonymous block in the SQL Developer workspace:

A screenshot of the SQL Developer workspace. The window title is 'ora41'. The toolbar shows various icons for execution and editing. The main text area is titled 'Enter SQL Statement:'. It contains the following SQL code:

```
DECLARE
  v_fname VARCHAR2(20);
BEGIN
  SELECT first_name
  INTO v_fname
  FROM employees
  WHERE employee_id=100;
END;
```

The line 'WHERE employee\_id=100;' is highlighted in yellow. The window has a scrollbar on the right side.

# Executing an Anonymous Block

Click the Run Script button to execute the anonymous block:

# Testing the Output of a PL/SQL Block

- Enable output in SQL Developer by clicking the Enable DBMS Output button on the DBMS Output tab:

- Use a predefined Oracle package and its procedure:
  - `DBMS_OUTPUT.PUT_LINE`

# Testing the Output of a PL/SQL Block

# Summary

In this lesson, you should have learned how to:

- Integrate SQL statements with PL/SQL program constructs
- Identify the benefits of PL/SQL
- Differentiate different PL/SQL block types
- Use Oracle SQL Developer as the programming environment for PL/SQL
- Output messages in PL/SQL

# Practice 1: Overview

This practice covers the following topics:

- Identifying which PL/SQL blocks execute successfully
- Creating and executing a simple PL/SQL block
